

Issue No.	Issue Description	Device/Screen Size	Impact	Suggestion/Notes
1	Input fields are too narrow on small mobile screens, causing difficulty in typing.	Mobile (320x568)	Medium	Increase width or make input fields responsive to 100% width.
2	Login button is partially cut off on very small mobile screens, forcing horizontal scrolling	Mobile (320x568)	High	Adjust button container padding/margin to avoid overflow.
3	Logo and header text overlap on smaller devices when keyboard is active.	Mobile (375x667)	Medium	Add margin-bottom or reduce logo size dynamically when keyboard shows.
4	Text in the 'Sign up for Facebook' link is too small on tablets, affecting readability.	Tablet (768x1024)	Low	Increase font size for better accessibility.
5	Password input field doesn't show "eye" icon to toggle visibility, affecting usability.	All devices	Low	Consider adding a toggle visibility icon for better UX.
6	Error messages or validation feedback are not visible or missing on responsive views.	Mobile & Tablet	High	Implement visible validation errors below input fields on all devices.
7	Page does not scroll properly when keyboard opens on mobile devices, causing some inputs or buttons to be hidden behind the keyboard.	Mobile (iOS/Android)	High	Adjust viewport settings or use scripts to ensure inputs scroll into view.
8	Screen resizing causes layout flicker or jump, affecting smoothness.	All devices during resizing	Low	Use CSS transitions or smoother layout changes to avoid flicker.
